

The Aviator

A previs board and a visdev sheet for one generated character.

Personal project
ComfyUI, July 2026

01 Wide establish
unscored at 108 px, yaw 15°

02 Full walk
unscored at 123 px, yaw 13°

03 Crouch at landing gear
0.43 / 0.45, yaw 56°

04 Flight map
0.58 / 0.67, yaw 17°

05 Close-up at dusk
0.55 / 0.61, yaw 49°

06 Goggles insert
0.85 / 0.77, yaw 2°

07 Climbing into the cockpit
0.28 / 0.58, yaw 40°

08 Low angle, ready
0.58 / 0.56, yaw 14°

Reference
Every frame was conditioned on this image.

Scores follow the head turn: the lowest, 03 and 07, are turned 56° and 40° from camera, and 07 also looks 34° down, where the two encoders disagree. The disagreement is what stands out, not either number. An earlier render of 08 scored higher on both encoders but did not read as her; the Lightning pass shown here replaced it, and is the softest frame because it decodes at half the size. The unrendered eyes in 01 and 02 sit below the 128 px scoring floor, and only a close look caught them. The skin in 05 is slightly waxy.

Model	Qwen-Image-Edit 2511 in ComfyUI with the Qwen 2.5-VL text encoder. Shot 08 is a four-step Lightning pass of the same model.
Identity	Held by the model from the reference image, with a prompt per shot.
Finish	Decoded through a 2x upscaling VAE, then a Nomos2 upscale pass resampled back to size.
Face swaps	Shots 01 and 02: a ReActor face pass from the same reference, inswapper_128, where an eye had gone unrendered at 108 and 123 px, under the swap's own 128 px output.
Identity check	Under each frame: cosine similarity to the reference, antelopev2 then SFace, and the detected head yaw. Faces under 128 px stay unscored rather than shown low.
Character	Synthetic throughout. The reference image was itself generated.

Same model, settings and reference as the board.

A rough scale for the numbers: the reference against a re-crop of itself scores 0.96 / 0.97, and against its mirror 0.95 / 0.92. What the numbers cannot give is a pass mark. In July the two encoders were checked against my own accept and reject calls on this character, and five frames rejected by eye scored 0.72 to 0.75 on antelopev2, inside the 0.56 to 0.97 range of the accepted ones. So a score here earns a frame a second look. It never settles one.
